Khanh Huynh

Associate Degree in Artificial Intelligence

Specializing in Neural Networks & Applied Machine Learning

https://github.com/w207762509/Khanh-Huynh-AI-Portfolio

Learning Journey

Academic Foundation & Skillset

My Learning Journey

1

Neuro Network (Convolutional)

2

Sequencing Modeling & NLP

3

Transformer & Attention Mechanism

4

Gen AI w Diffusion Model

5

Reinforcement Learning & AI Agent

6

Agentic System (RAG & Reasoning)

7

Project

FEATURED PROJECT

Translating Theory into Performance

AI Medical Diagnosis Model

Analyze complex medical images of MRI scan of brain tumors

Developed an AI powered medical diagnosis system to identify brain tumor from MRI scan using automated computer vision pipelines.

- → Utilized transfer learning with VGG16 architectures
- → Integrated XAI frameworks using Grad-CAM to generate visual heatmaps
- → Implemented advanced image preprocessing script utilizing OpenCV and imutils to perform noise reduction, contour detection, and automated cropping

Skills and Competencies

Programming

Expert in Python (NumPy, Pandas, Scikit-learn). Proficient in SQL for backend database.

DL Frameworks

Hands-on experience with TensorFlow and PyTorch for building and training neural networks.

Deployment

Experience with Langchain to build, manage & deploy AI apps powered by LLMs

Reflection and Next Steps

Reflection

Throughout my Associate degree in Artificial Intelligence, I have moved beyond theoretical understanding to the practical application of complex neural networks. My focus has centered on **Deep Learning** and **Computer Vision. T**his experience taught me that in AI, accuracy is only half the battle but transparency and trust—especially in healthcare applications—are just as critical.

Future Goals

My immediate goal is to transition into a **Bachelor of Science program in Computer Science or Artificial Intelligence**.
